CHASE BRASS & COPPER CO.

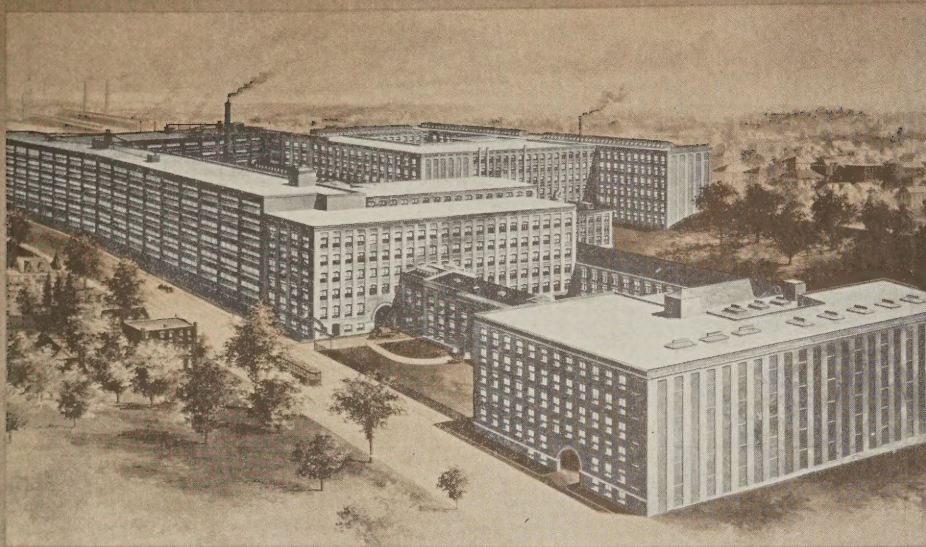

WATERBURY, CONNECTICUT

CATALOG No. 8

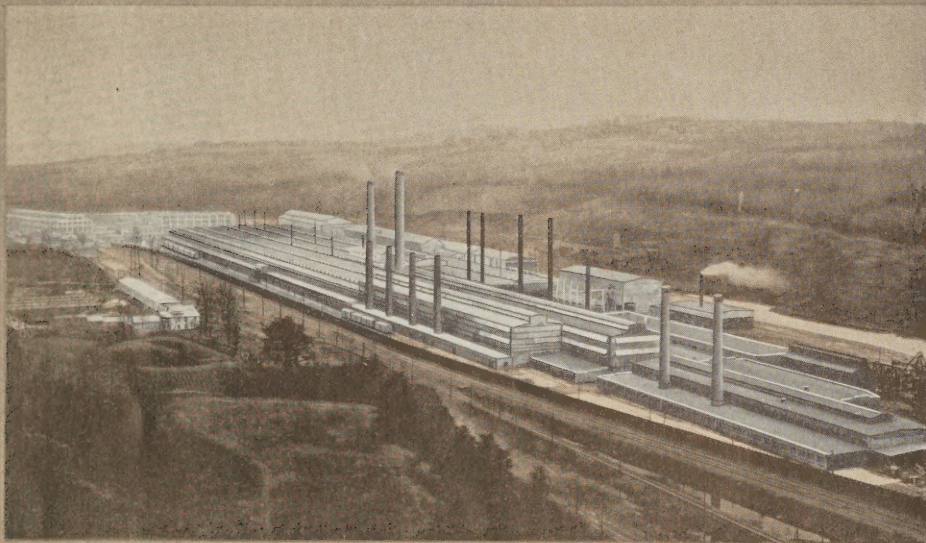

COPYRIGHTED 1937—CHASE BRASS & COPPER CO., INCORPORATED

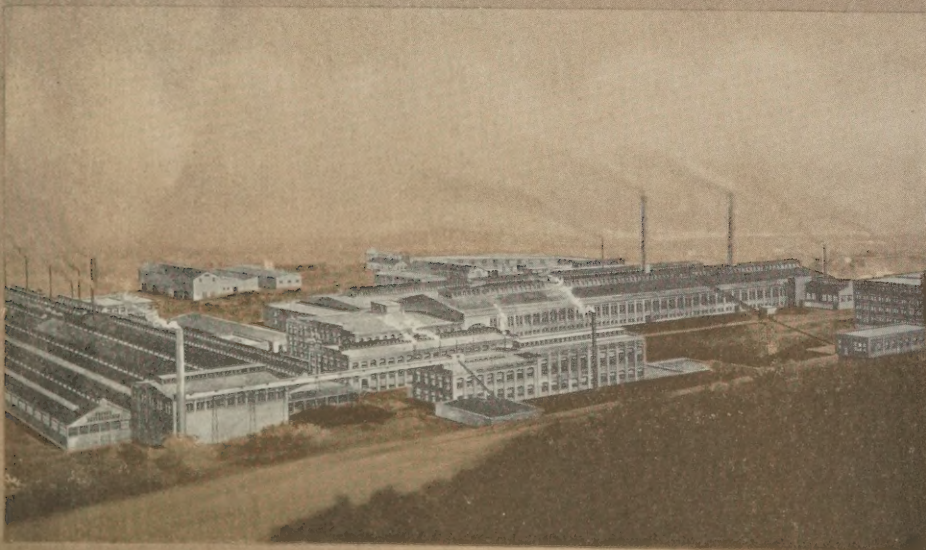

**Offers in this Catalog a Complete
Line of Correctly Designed and
Properly Constructed Fixtures**

In this plant, one of the largest of its kind, all Chase lighting fixture metal parts are fabricated

This plant, almost a mile in length, is one of three large Chase brass and copper mills

Here is a view of the Chase rolling mills, where brass and copper are rolled and annealed

Factories and Facilities

Ever since the year 1837, that is 100 years ago, the manufacturing plant of the Chase Brass & Copper Co. has maintained a keen interest in the progress and advancement of lighting equipment. Starting with candlestick holders, then to kerosene lamps, Bunsen burners and finally to the manufacturing of a complete line of Residential and Commercial Lighting Fixtures.

Chase Lighting Fixture metal parts are made of rust-proof Brass or Copper, and the fabrication of metal parts used in the construction of Chase Fixtures is all done in our own plant under our own supervision.

The designing and manufacturing of Chase Fixtures is managed by a competent staff, many of whom have devoted their entire business lives to lighting. We are fortunate in securing the services of designers, mechanics and supervisors who have an intimate and thorough knowledge of Lighting Fixtures.

You may feel sure that in selecting Chase Fixtures you have correct designs, proper mechanical construction and the assurance that, with the exception of brackets that have French hooks, which are

not considered an approved style of construction by the National Board of Fire Underwriters, *Chase Fixtures* bear the label of approval of the National Board of Fire Underwriters.

Chase Fixtures are sold only through qualified Electrical Dealers and Contractors.

Chase Tower -->

A complete and permanent display of Chase Lighting Fixtures is maintained on the entire 48th floor at Chase Tower—10 East 40th St., New York City.

Here most of the Chase Fixtures are separated into various period designs and appropriately displayed in alcoves which are decorated in the same style as the fixture.

To all distributors of lighting fixtures and to your prospects and customers, we extend a cordial invitation to see this beautiful display of ceiling fixtures, wall brackets and lanterns.

THE ADVANTAGES OF

BEFORE:

This is a room improperly lighted with ordinary lighting fixtures.

AFTER:

This is the same room lighted with Chase "Even-Glow" fixtures that give scientific diffused light.

SCIENTIFIC LIGHTING

Glare Blinds and Darkness Strains the Eyes

The wrong kind of light is injurious to the eyes and is just as bad as not having enough light.

For example, too bright a light concentrated in a small spot with the rest of the room improperly lighted or in darkness, is harmful to the eyes because of the extreme contrasts between the intense light and dark areas, and causes nervousness and fatigue.

Ceiling Fixtures Give Best Results

The importance of not only adequate lighting throughout a room, but an adequate amount of light properly distributed for eye protection, can be accomplished best with the use of a ceiling fixture.

Scientific Light Saves Eyesight

Scientific light is diffused, glareless light, light that is evenly distributed throughout a room, so that there are no areas of semi-darkness. A large percentage of defective eyesight is caused by improper light, and is a reason for many a backward school child. And that tired feeling brought on by reading or playing cards under inadequate light, or glaring light, can be avoided by properly lighting the room with scientific, diffused light.

Diffused Light is Restful to the Eyes

Tired feet make a tired body, but tired eyes make one mentally and physically weary. Under the right kind of light, the eyes are relaxed, and can see without effort. Diffused light is science's best approach to daylight. It is so natural to the eyes that it makes reading and working indoors easy on the eyes and restful.

CHASE "EVEN-GLOW" *

Give Scientific

Scientifically Designed

Chase "Even-Glow" Fixtures were one of the first complete residential lines designed to give Scientific Light. They were designed by an outstanding illuminating engineer and experienced lighting fixture designers after much study and research, to give better light in the homes of today.

Diffused Light

Chase "Even-Glow" Fixtures give correct light because they direct the light to the ceiling from where it is reflected evenly throughout the room.

More Light at Same Cost

Chase "Even-Glow" Fixtures give more light at no extra current cost. How? By using one large bulb rather than several small bulbs. A single 200 watt bulb in a Chase "Even-Glow" fixture gives 3,400 units of light or 1,240 units of light more than do five 40 watt bulbs in an ordinary fixture using the same amount of current. That is, you get 57% more light from a large bulb in a Chase "Even-Glow" Fixture—plus modern Scientific Light.

New Bowls

The bowls of Chase "Even-Glow" Fixtures are moulded of translucent plastic. These plastic bowls give a pleasing, soft, glareless light. They are extremely durable—practically shatterproof—light in weight, and easier and safer to handle.

Finishes

There are beautiful, lasting finishes applied to these Chase "Even-Glow" Fixtures and the prices are within reach of the purse of the average home owner and builder.

*Trade Mark

BEFORE: Excessive glare from the fixtures in this room causes uncomfortable seeing conditions; it also causes headaches, nervousness and fatigue.

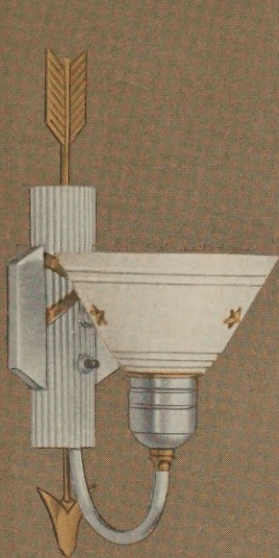

AFTER: Here's the same room properly lighted with Chase "Even-Glow" fixtures. There is no semi-darkness, no irritating bright spots to annoy the eyes.

Do not use a larger bulb than the size recommended for each Chase "Even-Glow" Fixture. Use only inside frosted bulbs for even illumination.

LIGHTING FIXTURES

Illumination

1576

1575

1574

No. 1576

One-light bracket with a 6" Plastic reflector. Metal star decorations are in the shade. Over-all length 14". Extends 7". Has switch. Finish: Pewter and Gold.

No. 1262 Chase brackets.*

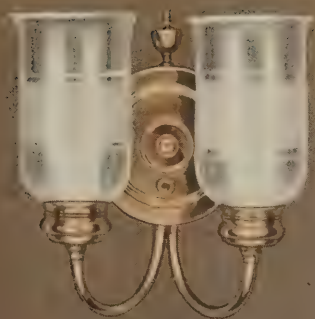

Suitable for Early American and Colonial Interiors

The Chase Lighting Fixtures in this group have been designed to meet the growing demand for fixtures for the Colonial and Early American type homes of today that are being built throughout the country.

We have developed a wide range of designs, including wall brackets, ceiling fixtures, hall and porch lanterns and beam lights which are suitable in both design and finish for interiors of this type.

These fixtures range from authentic Early Colonists' designs to the more modernized Colonial that is so popular today.

Chase Lighting Fixtures are made of Chase Brass or Copper which will not rust or deteriorate, and assuring the owner a long life for his fixtures. The beautiful finishes applied to Chase Fixtures are also lasting because of the rustproof basic metal on which they are applied.

CHASE LIGHTING FIXTURES

This dining room is lighted with the Chase No. 1601 ceiling fixture and No. 1653 wall brackets. Larger illustrations of these fixtures are shown on opposite page.

Suitable for Federal Interiors

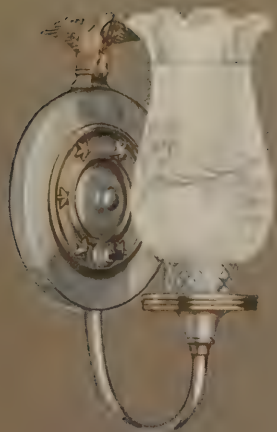

Because of the close relation of Directoire, Empire, Colonial, Adam, Hepplewhite, Sheraton and Duncan Phyfe designs, the Chase Fixtures in this Federal group may be used satisfactorily with any of these periods. They are shown on pages 25, 26, 27 and 28.

The interiors of the Federal era were generally white, high ceilinged, and the doors beautifully paneled. This reflected the gracious dignity and prosperity of the times. Lighting Fixtures of this era

became beautiful examples of the decorative arts.

In reproducing fixtures for the Federal era, we have sought to make use of symbols such as the American Eagle, and the stars and flags which were symbolic of the young republic.

Home owners so frequently ask for ceiling fixtures and wall brackets of matching design that we have shown ensembles on these catalog pages.

CHASE LIGHTING FIXTURES

In this Georgian dining room can be seen the No. 1714 Chase ceiling fixture and No. 1704 wall brackets. See page 30 for larger illustrations.

Suitable for Georgian Interiors

The Chase Fixtures in this group are also suitable for homes furnished in the style of Queen Anne, Chippendale, Adam, Hepplewhite, Sheraton or Colonial. They are shown on pages 30, 31 and 32.

The Georgian period expressed a dignified, leisurely order of life, which is reflected in this group of Chase Fixtures. In their creation we have favored the simpler Georgian designs because they are more fitting for the present day interiors.

We have made use of shells, urns, fretwork, flame finials, leaves and swag decoration, thus giving these Chase Fixtures a character and individuality all their own.

Made of Chase Brass and with beautiful, lasting finishes, your customers get quality and a combination of good workmanship and reasonable prices when you sell them Chase Lighting Fixtures.

CHASE LIGHTING FIXTURES

This attractive Empire room is lighted with the No. 1600 Chase ceiling fixture and the No. 1651 wall brackets. Larger illustrations of these fixtures are on page 34.

Suitable for Empire Interiors

Because Federal and Empire periods were closely related in spirit and character, many fixtures may be used in either of these interiors.

Adding characteristic symbols of the time, such as shields, bundles of arrows and wreaths of laurel, Chase Fixtures in this group make possible a choice of either simple classic forms or the more colorful fixtures typical of this period.

For the person looking for lighting fixtures with the touch of Empire Symbols to go in rooms of this style, or for the many people who make their selections purely from eye appeal, this group offers a splendid selection of matching fixtures.

Like all other Chase Fixtures the basic metal of this group is either rustproof Brass or Copper — sturdily constructed and reasonably priced.

CHASE LIGHTING FIXTURES

The Chase fixtures lighting this attractive dining room are No. 1658 ceiling and No. 1660 wall brackets. Larger illustrations of these are on the opposite page.

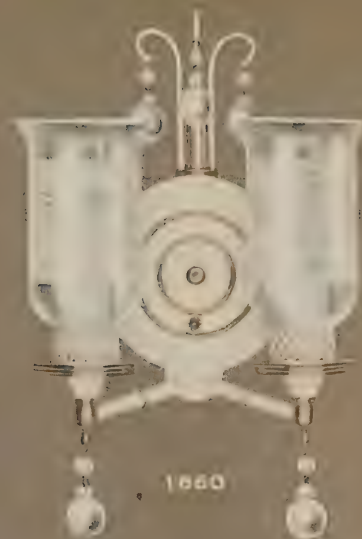

Suitable for Neo Classic Interiors

The Neo Classic or Modern style, although new, is decidedly growing in use. In reality it is a successful blending of Ancient and Modern motifs.

In presenting our Neo Classic designs we offer ensembles of beautifully decorated and original looking wall brackets and ceiling fixtures that have a

modern feeling and inspiration which makes them very striking. They are shown on the opposite page.

Unusual workmanship is apparent in every fixture, also the excellent quality of the materials, for we use nothing but the finest glass and only lasting Chase Brass as the basic material.

No. 1657

Five-light ceiling fixture with cut glass chimneys and crystal trim. Over-all length 36". Spread 20". Finishes: Bone White and Gold or Pewter and Gold.

No. 1659

One-light bracket with cut glass chimneys and crystal trim. Height 13". Back plate 5 1/4". Extends 5". Has switch. Finishes: Bone White and Gold or Pewter and Gold.

No. 1660

No. 1658

Five-light close-up ceiling fixture with cut glass chimneys and crystal trim. Over-all length 21". Spread 20". Finishes: Bone White and Gold or Pewter and Gold.

CHASE LIGHTING FIXTURES

Lighting this charming English living room are the No. 721 wall brackets and No. 736 ceiling fixture. Larger illustrations of these fixtures are shown on page 42.

Suitable for Early English Interiors

The simplicity of the designs in these fixtures makes them equally suitable for Norman Houses and many may also be used in Early American, Dutch Colonial, Spanish, and Italian type houses. They are shown on pages 41 and 42.

In this group, instead of creating wall brackets to definitely match the ceiling fixtures, we have followed the more desirable practice of creating brack-

ets which, while related in design and finish, are sufficiently individual to permit the home owner to express his or her own ideas in the lighting decoration of a room or entire home.

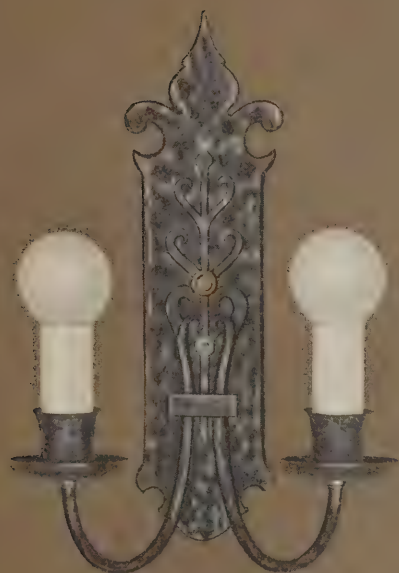

Therefore, any wall bracket can be used successfully with the ceiling fixtures of this group, for in designing them we have purposely avoided the look of obviously matched sets of fixtures.

CHASE LIGHTING FIXTURES

The No. 1719 ceiling fixture and No. 526 wall brackets contribute to the beauty of this fine modern living room. Larger illustrations of these fixtures are shown on pages 44 and 45.

Suitable for Classic Modern Interiors

In presenting this group of Chase Classic Modern Lighting Fixtures, which are shown on pages 44, 45, 46 and 47, we answer the unprecedented need for modern looking and well designed fixtures. We have combined the best in modern design with modern scientific lighting.

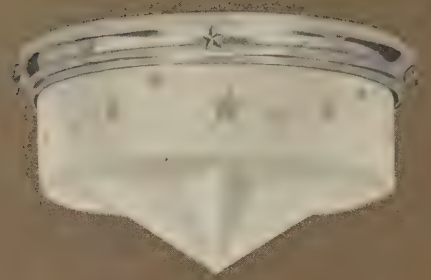

The center ceiling fixture is usually the dominating source of light in most modern interiors. For such interiors we have created both close and hanging-

type fixtures that are suitable for modern homes. For supplementary lighting as well as good-looking and nicely proportioned fixtures, the wall brackets are used successfully with any of the ceiling fixtures in this group.

Many of the Chase Classic Modern Fixtures make use of a beautiful, lustrous, non-tarnishing chromium finish and only the finest glassware is used.

522

GENERAL INFORMATION

Stock

While we cannot guarantee to have all items in stock at all times, we do endeavor to keep a stock which will enable us to make prompt shipments.

Packing

Our merchandise is carefully packed and should arrive in good condition. Claims for damaged merchandise should be taken up with the transportation company.

Special Finishes

It is impossible for us to have a standard charge for special finishes because some fixtures require so much more time than others. We will gladly quote the additional cost for special finishes.

Ordering

When ordering, please use catalog numbers, also state the finish desired and how you want your goods shipped.

Returned Goods

Merchandise is not to be returned without securing written permission in advance. Goods returned without our permission will not be accepted.

Terms

When credit has been established, 2% discount will be allowed on all invoices paid on or before the tenth of the month following date of shipment. All shipments are F. O. B. Waterbury, Conn. If a sales tax is enacted it will be added to the invoice covering the shipment of any articles in this catalog.
